**Payment Processing, Inc. Announces the Availability of
PPI PayMoverSM Payment Gateway**

Online Payment Gateway Available to Software Developers and Their Customers Free of Charge

Newark, California, June 21, 2005 - Payment Processing, Incorporated (PPI), the industry leader in integrated transaction processing, announced today the availability of a next generation payment processing gateway, PPI PayMover. This breakthrough gateway includes credit card support for card present and card not present transactions as well as ACH transactions through a single clientless solution. In addition, application software developers will be given this technology, development level services and unlimited on-going support without charge.

“Developing an integrated payment solution is a complicated process requiring a significant level of knowledge that includes payment industry compliance provisions, merchant account implementation requirements, payment technology SDK expertise and application integration functionality,” according to Chuck Riegel, Executive Vice President of PPI. “Software developers need to concentrate on their applications and don’t have time to acquire the background knowledge needed to develop a competitive integrated payment processing offering on their own. The addition of PPI PayMover to the PPI Advantage Partner Program presents software developers with an opportunity to create a comprehensive integrated payment processing solution in less time and at a significantly reduced cost.”

-more-

Offered exclusively through the PPI Advantage Partner Program for software developers, PPI PayMover is now available for integration into all commerce enabled software applications such as POS, recurring payments, accounting, E-Commerce, billing, ERP and CRM.

The PPI Advantage Partner Program gives software developers the ability to develop a comprehensive integrated payment solution by providing them with merchant account services along with all the technology and support services needed to integrate, test and deploy a seamless payment solution. In addition, PPI provides a revenue sharing opportunity for their Advantage Partners. As a result, software developers can provide a cutting edge integrated payment solution without gateway fees while simultaneously reducing support costs and generating revenue.

PPI PayMover Features include:

- Payments: Credit Card, Offline Debit Card, ACH, Recurring Batch Processing, Card Present, Card Not Present/E-Commerce, Robust Reporting and Purchase Card Level II
- Simple integration via a clientless API: .Net, SOAP, ASP, VB Script, CGI, PERL, JAVA, XML, C/C++ and PHP
- Security: Along with industry standard security PPI has an in-house Risk Management / Fraud Monitoring Team
- Communication: TCP/IP, Dial-up Internet
- Compliance: PPI PayMover is Payment Card Industry (PCI) Data Security Standard compliant
- Performance: Designed to address enterprise level performance needs
