Payment Processing, Inc. Announces the Availability of the Industry's First Comprehensive Integrated Payment Solution for Microsoft Great Plains and Solomon Accounting Suites

Solution Includes the Free PPI PayMover™ Gateway and Significant New Revenue for VARs

Newark, California, July 6, 2005 - Payment Processing, Incorporated (PPI), the industry leader in integrated transaction processing, announced today the availability of the industry's first comprehensive integrated payment solution for both Microsoft® Business Solutions – Great Plains® and Solomon accounting suites. Both solutions feature PPI's recently announced PPI PayMover Gateway - a breakthrough gateway which includes credit card support for card present and card not present transactions through a single clientless solution. The solutions include an integrated payments module, free integrated payment gateway services, merchant account services, and single source support.

“In the past, payment products for these accounting packages required VARs to cobble together miscellaneous components from a variety of vendors,” says Tim Murray, Director of Strategic Partnerships at PPI. “The PPI solutions not only provide a comprehensive solution from one vendor but also offer VARs two potential revenue streams which include commissions on credit card processing volume from merchant referrals as well as add-on software sales.”

Both solutions feature the ability to enter payment processing information directly in the accounting suite or perform web-based payment transactions through direct integration with the back-office suites. Additionally, the solutions provide the Great Plains and Solomon customer the flexibility to process either type of transaction in real-time or batch.

Through PPI, Microsoft VARS and their customers have a complete solution for integrated credit card processing including:

- Best in class integrated payments module with direct integration and web-based interfaces
- Free internet-based payment processing services with the PPI PayMover gateway
- Configuration, testing, and training
- Unlimited in-house 24/7/365 technical and administrative support
- Competitive pricing for merchant services
- All tightly integrated and managed through a single resource – Payment Processing, Inc.

PPI teamed with two established Microsoft Certified Independent Software Vendors to develop both solutions.

Integrated Software, Inc. (www.isiusa.com) partnered with PPI to deliver the Great Plains solution. According to General Manager Marilyn Peio, “This is the only solution on the market that offers a complete package from swiping the credit card to processing with the acquiring merchant bank. This integrated solution helps customers streamline operations and significantly reduce errors from manual entry into the accounting suite.”

Accounting System Integrators (www.asillc.com) partnered with PPI to develop the Solomon solution. According to Principal Bill Dean, “With this comprehensive solution, VARs no longer have to worry about providing technical support for various components of the solution. VARs have one partner to turn to for all aspects of support – a first in this industry.”

For more information, please visit the PPI web site at www.paypros.com or call (866) 463-0993. In addition, both products will be demonstrated at the Microsoft World Wide Partner Conference July 8 through 10. PPI will be at booth #641.

ABOUT PAYMENT PROCESSING, INC.

Payment Processing, Inc. is the industry leader in providing integrated payment processing solutions. Through partnerships with software developers, the privately-held firm has acquired a unique perspective on the issues and opportunities associated with integrated payment processing for developers, their resellers, and their customers.

Today, PPI is the most successful company in the world focused on integrated payment processing, supporting over 500 software developers and more than 10,000 merchants with efficient, cost-effective payment solutions. In 2005, PPI will process nearly \$3 billion in Visa® and MasterCard® payments, helping software partners generate a substantial new revenue stream while consistently reducing support costs.
