Department: Software Development
Status: Exempt
Location: Newark, CA

Job Summary:

This position is a senior software development role that involves participation in all facets of the software development process and lifecycle. This position is also responsible for all aspects of developing solutions for a wide range of server and client based applications from requirements definition and functional design to technical design and implementation.

Duties and Responsibilities:

- Involved in all aspects of developing solutions for a wide range of server and client applications from requirements definition and functional design to technical design and implementation.
- Analyze functional requirements and contribute to functional and logical design of projects.
- Develop production-level code; perform unit testing and integration testing.
- Perform code review for peer's work
- Coordinate with various teams and external contacts to ensure project deadlines are met.
- Assist or lead in the design, development, documentation and maintenance a variety of different software systems for both external and internal customers.
- Work closely with product managers, and other engineers in a development environment that is highly collaborative.
- Provide support for system users and processes ensuring that problems are solved and status and resolutions communicated appropriately.
- Investigate and troubleshoot production issues, manage issues in a defect management system.
- Participate in the testing process through test review and analysis.

**Knowledge, Skills and Abilities:**

- A background launching innovative and secure Web technologies in traditional B2B and B2C environments primarily supporting the financial services market.
- A deep understanding of current technologies and best practices of web application design and implementations.
- Time management skills and the ability to work on multiple projects concurrently are critical.
- Excellent communication skills.

Credentials and Experience:

- 4+ years demonstrated development and implementation of web-based enterprise applications in a multi-tier in commercial software, online service or ideally a financial services software development environment.
- 4+ years demonstrated .Net C# software development experience in a mission critical environment using Spring .Net and NHibernate.
- 4+ years demonstrated Oracle database design and development experience.
- Demonstrated experiences in multi-threading system development and troubleshooting.
- Understanding of XML/XSLT/XPATH.
- Web rich user interface development experience is a plus.
- Experience in test-driven design and the Agile development process.
- Bachelor's degree in computer science, computer engineering, or software engineering preferred.

Special Requirements:

- May require travel between corporate offices (Vancouver BC and Newark CA) occasionally.
- Be legally eligible for employment in USA, and possess a valid passport and ability to travel to both the USA and Canada

What We Offer Our Employees:

- The Opportunity to Work with a Great Team!
- The Chance to have an Impact and Make a Difference.
- Full Benefits Packages
- Paid Time Off
